

利用Wiley高品质资源发表 国际论文

Wiley 中国·市场部 版本号：RESM-CHN-CONFERENCE-CAS-201904

以下内容仅代表培训师个人观点，与Wiley公司无关。

WILEY

通过本次培训您将了解到：

1. Wiley电子资源整体介绍
2. Wiley Online Library电子资源使用技巧与科研进展追踪
3. Wiley多篇下载功能
4. Wiley出版流程及政策介绍
5. 新常态，新服务

A close-up photograph of a hand watering young green plants in a field. The hand is holding a watering can, and a single drop of water is falling from the spout onto the soil. The background is dark and out of focus, showing more seedlings.

Wiley始终致力于向中国客户提供更加
优质的产品与解决方案

Wiley的历史

- 创始于1807年，迄今已210年历史
- Wiley家族第七代
- 服务于1500万研究人员和专业人士
- 与高校合作222个在线项目
- 600万人使用我们的培训平台
- 450+诺奖得主
- 全球5100+员工
- 全球分布30个国家，76个办公室

WILEY

Wiley期刊影响力深远且广泛

在研究领域，Wiley出版的期刊无论是对研究人员发现新成果还是对作者发表研究论文都有着巨大的影响力。

广泛分布在世界各地的机构也将这些内容传递给更多的读者。

Wiley出版的跨学科内容广受世界各地读者的赞誉。

1,600+ 种期刊

超过 **880万** 篇文章

每年超过 **3.5** 亿次

Search Tips

检索技巧

You can use the Boolean operators AND (also + or &), OR and NOT (also -) within search fields. These operators must be entered in UPPERCASE to work.

If more than one term is entered, and no

可增添至七个检索框，每个检索框中可使用布尔运算符“AND, OR, NOT”进行连接；支持通配符

AND cold while *spinal cord* finds this exact phrase.

Wildcards

Use a question mark (?) in a search term to represent a single character (*wom?n* finds women or woman). Use an asterisk (*) to represent zero or more characters. For example, *plant** finds all words with that root (plant, plants, & planting) while *an*mia* finds variants with one or more letters (angmia & anaemia). Wildcards CANNOT be used at the start of a search term (**tension*) or when searching for phrases in quotes (*"tobacco smok*"*).

Abstract

Energy storage is more important today than at any time in the history of humankind. Generations of rechargeable lithium batteries are required to power portable electronic devices (cellphones, laptop computers etc.), store electricity as a vital component in new hybrid electric vehicles. To achieve the energy and power density essential to meet the future challenges of transportation and materials chemistry, and especially new nanomaterials chemistry, we must find ways of synthesizing new nanomaterials with new properties, for use as electrodes and electrolytes in lithium-ion batteries. In this article, some of the recent scientific advances in nanomaterials, and their application to materials, for rechargeable lithium-ion batteries.

Abstract

Energy storage is more important for generations of rechargeable lithium devices (cellphones, laptop computers) as a vital component in new hybrid and power density essential to materials chemistry, and especially find ways of synthesizing new materials, for use as electrode materials, for rechargeable lithium.

1. Introduction

The storage of electrical energy will be far more important in this century than it was in the last. Whether to power the myriad portable consumer electronic devices (cell phones, PDAs, laptops, or for implantable medical applications, such as artificial hearts, or to address

Download Citation

If you have the appropriate software installed, you can download article citation data to the citation manager of your choice. Select your citation manager software from the list below and click Download.

Tips on downloading citation

This feature enables you to download the bibliographic information (also called citation data, header data, or metadata) for the articles on our site.

Citation manager file format
Use the radio buttons to choose how to format the bibliographic data you're harvesting. Several citation manager formats are available, including EndNote and BibTex.

Type of import
If you have citation management software installed on your computer your Web browser should be able to import metadata directly into your reference database.
Direct Import: When the Direct Import option is selected (the default state), a dialogue box will give you the option to Save or Open the downloaded citation data. Choosing Open will either launch your citation manager or give you a choice of applications with which to use the metadata. The Save option saves the file locally for

On the left sidebar, there are icons for '收信' (Receive Mail) and '写信' (Write Mail). Below these are folders: '收件箱 (1773)', '红旗邮件' (Red Flag Mail), '待办邮件' (To-do Mail), '智能标签' (Smart Tags), '星标联系人邮件' (Starred Contact Mail), '草稿箱' (Drafts), '已发送' (Sent), '订阅邮件 (5)' (Subscription Mail (5)), '其他3个文件夹' (Other 3 folders), '邮件标签' (Mail Labels), '邮箱中心' (Mailbox Center), '文件中心' (File Center), and '邮箱附件' (Mailbox Attachments). At the bottom of the sidebar is a banner for 'Wiley Digital Archives' with the text 'Integrating hundreds of years of historical evidence into everyday research' and 'AVAILABLE NOW'.

The main content area shows a list of 1773 unread emails, with a note '全部设为已读' (Set all as read). The list includes several alerts from Wiley Online Library and Angewandte Chemie. The interface also features action buttons like '删除' (Delete), '举报' (Report), '标记为' (Mark as), '移动到' (Move to), '更多' (More), and '刷新' (Refresh). Pagination controls show '1/110' and navigation arrows.

A close-up photograph of a hand watering young green seedlings in a field. The hand is positioned on the right side of the frame, with water dripping from the fingers onto the soil. Several thin green stems with small leaves are visible in the foreground and background, growing out of dark, rich soil. The lighting is soft, highlighting the texture of the soil and the freshness of the plants.

Abstract

There is a worldwide concern about the new coronavirus 2019-nCoV as a global public health threat. In this article, we provide a preliminary evolutionary and molecular epidemiological analysis of this new virus. A phylogenetic tree has been built using the 15 available whole genome sequences of 2019-nCoV, 12 whole genome sequences of 2019-nCoV, and 12 highly similar whole genome sequences available in gene bank (five from the severe acute respiratory syndrome, two from Middle East respiratory syndrome, and five from bat SARS-like coronavirus). Fast unconstrained Bayesian approximation analysis shows that the nucleocapsid and the spike glycoprotein have some sites under positive pressure, whereas homology modeling revealed some molecular and structural differences between the viruses. The phylogenetic tree showed that 2019-nCoV significantly clustered with bat SARS-like coronavirus sequence isolated in 2015, whereas structural analysis revealed mutation in Spike Glycoprotein and nucleocapsid protein. From these results, the new 2019-nCoV is distinct from SARS virus, probably transmitted from bats after mutation conferring ability to infect humans.

KEYWORDS

coronavirus, epidemiology, macromolecular design, SARS coronavirus

1 | INTRODUCTION

The family *Coronaviridae* comprises a group of large, single, plus-stranded RNA viruses isolated from several species, and it is previously known to cause the common cold and diarrheal illnesses in humans.^{1,2} In 2003, a new coronavirus (severe acute respiratory syndrome coronavirus [SARS-CoV]) was associated with the SARS outbreak.^{1,2} Recently, a new coronavirus (2019-nCoV) has emerged in the region of Wuhan (China) as a cause of severe respiratory infection in humans. Since December 2019, different cases of pneumonia of unknown origin associated with permanence at the Wuhan market in China have been reported.³⁻⁶ A new coronavirus, named 2019-nCoV, belonging to the *Orthocoronavirinae* subfamily, distinct

from MERS-CoV and SARS-CoV, was described.⁷ To date, a total of 1975 pneumonia cases have been confirmed in China (the State Council Information Office in Beijing, capital of China, 26 January 2020).^{6,7} Animal to human transmission is considered the origin of epidemics, as many patients declared to have visited a local fish and wild animal market in Wuhan in November. Quite recently, evidence has been gathered for the animal to the human and interhuman transmission of the virus.^{7,8}

Although prompt diagnosis and patient isolation are the hallmarks for initial control of this new epidemic, molecular epidemiology, evolutionary models, and phylogenetic analysis can help estimate genetic variability and the evolutionary rate, which in turn have important implications for disease progression as

456

WILEY | JOURNAL OF
MEDICAL VIROLOGY

BENVENUTO ET AL.

well as for drug and vaccine development. In this short report, we provide a phylogenetic tree of the 2019-nCoV and identify sites of positive or negative selection pressure in distinct regions of the virus.

2 | MATERIAL AND METHODS

The complete genomes of 15 2019-nCoV sequences have been downloaded from GISAID (<https://www.gisaid.org/>) and GenBank (<http://www.ncbi.nlm.nih.gov/genbank/>). A dataset has been built using five highly similar sequences for SARS, two sequences for the Middle East respiratory syndrome (MERS), and five highly similar sequences for bat SARS-like coronavirus. The percentage of similarity has been identified using a basic local alignment search tool (<https://blast.ncbi.nlm.nih.gov/Blast.cgi>); eventually duplicated sequences have been excluded from the datasets. The dataset including 27 sequences has been aligned using multiple sequence alignment online tool⁹ and manually edited using BioEdit program v7.0.5.¹⁰

Maximum likelihood (ML) methods were employed for the analyses because they allow for testing different phylogenetic hypotheses by calculating the probability of a given model of evolution generating the observed data and by comparing the probabilities of nested models by the likelihood ratio test. The best-fitting nucleotide substitution model was chosen by jModeltest software.¹¹ ML tree was reconstructed using generalized time-reversible plus gamma distribution and invariant sites (+G+I) as an evolutionary model using MEGA-X.¹²

The adaptive evolution server (<http://www.datamonkey.org/>) was used to find eventual sites of positive or negative selection. For this purpose, the following test has been used: fast unconstrained Bayesian approximation (FUBAR).¹³ This test allowed us to infer the site-specific pervasive selection, the episodic diversifying selection across the region of interest, and to identify episodic selection at individual sites.¹⁴ The statistically significant positive or negative selection was based on P value less than .05.¹⁴

Homology models have been built relying on the website SwissModel.¹⁵ Structural templates have been searched and validated using the software available within the SwissModel environment and HHPred.¹⁶ Homology models have been validated using the QMEAN tool.¹⁷ Three-dimensional structures have been analyzed and displayed using PyMOL.¹⁸ To map the structural variability of the N, E, S, and M regions of the virus and their sites under selection pressure, homology modeling has been applied to the sequence of 2019-nCoV.

3 | RESULTS

The ML phylogenetic tree, performed on whole genome sequences, is represented in Figure 1. In the tree, MERS virus sequences formed a distinct clade (clade I) from Bat SARS-like coronavirus, SARS virus, and the 2019-nCoV clustering together in clade II. This clade includes

4 | DISCUSSION

The data reported above show that the new 2019-nCoV significantly clustered with a sequence from the bat SARS-like coronavirus isolated in 2015. Moreover, in the phylogenetic tree, these two sequences are separated from the other bat SARS-like coronavirus sequences, suggesting that this bat SARS-like coronavirus is homologous and genetically more similar to the 2019-nCoV than to the other sequences of Bat SARS-like coronavirus. This supports the hypothesis that the transmission chain began from the bat and reached the human. All other genomic sequences represented in the phylogenetic tree, also including SARS and MERS coronavirus, clustered separately, thus excluding the fact that the virus involved in the actual epidemic could belong to these subgenuses. The structural analysis of two important viral proteins, the nucleocapsid and the spike-like nucleoprotein (protein S), confirmed the significant similarity of the new coronavirus with the bat-like SARS coronavirus and its difference from SARS coronavirus.

From the selective pressure and structural analysis, mutations of surface proteins, as the spike protein S, and of nucleocapsid N protein conferring stability to the viral particle have been shown. The viral spike protein is responsible for virus entry into the cell after by binding to a cell receptor and membrane fusion, two key steps in viral infection and pathogenesis. The N protein is a structural protein involved in virion assembly, playing a pivotal role in virus transcription and assembly efficiency. Mutation of these proteins could determine two important characteristics of the coronavirus isolated during the 2019-nCoV epidemic: a higher ability to infect and enhanced pathogenicity than the bat-like SARS coronavirus but lower pathogenicity than SARS coronavirus. These features can explain the 2019-nCoV zoonotic transmission and its initial lower severity than SARS epidemic. These results do not exclude the fact that further mutation due to positive selective confirmed by FUBAR analysis, suggesting that the 2 region could be highly conserved.

Overview

Incorporating the *European Journal of Surgery* and *Swiss Surgery*

A journal formed by the union of the *British Journal of Surgery*, *Acta Chirurgica Scandinavica*, publisher of the *European Journal of Surgery*, and the Swiss Society of Surgery, publisher of *Swiss Surgery*.

The journal is specially related to the Association of Surgeons of Great Britain and Ireland, the Association of Surgeons in Training, the Spanish Society for Surgical Research, the Swedish Surgical Society and the Swiss Society of Surgery.

Aims and Scope

With an impact factor of 5.572, *BJS* is the premier surgical journal in Europe and one of the top six surgical periodicals in the world. Its international readership is reflected in the prestigious International Editorial Board, supported by a panel of over 1200 reviewers worldwide.

科研领航，助力发表——“Wiley科研云学院” 1.0版惊喜亮相！

查找文献&寻找期刊 论文写作&稿件准备 同行评审&出版流程

提升论文学术影响力 学术出版道德 直播预告

回看专区

畅游云学院，get专属“福袋”

即日起，凡登录Wiley科研云学院平台的观众，将有机会获得Wiley限量帆布袋一只！我们将从平台用户中随机抽取100名作为幸运观众，并将中奖信息通过Wiley科研云学院平台通知。

伴随新学年的到来，Wiley科研云学院正式上线并开放给广大科研群体。作为Wiley论文发表出版指导与学术活动服务的整合资源平台，Wiley科研云学院以满足科研人员多样化需求为目标而搭建，通过专家名师和高影响力期刊编辑的微视频课、热门在线直播、作者交流社区等多维渠道，精心准备了文献查找，论文撰写，论文发表及出版，科研成果推广等学术指导课程，以及陆续推出的在线学术讲座/会议/培训等颇具实用性的资源。我们希望能陪伴每位学术用户探索科研的广度和深度，助力科研人员精进学识、提升自我。

在Wiley科研云学院中，用户将体验：

系统化在线学习——精品名师与Wiley编辑视频课程，教你如何撰写及发表论文，倍速播放，记忆性学习，伴随式音频播放，手机端PC端怎么看都好看；
便捷参会——即时观看热门学术直播及知名学者讲座，直播回看两不误；
资源获取——订阅线上学术活动提醒，抢先获取相关资源及信息；
高效互动——通过作者交流社区，与Wiley和各高校院所科研人员在线讨论。

浏览及登录入口：

仅需两步，带你“畅游”Wiley科研云学院！扫码关注“wiley科研服务”公众号（ID: wileyresearch），主菜单中点击“云学院”即可访问：

Thank you!
